This is an updated version of the PlayStation 2 peripheral, the EyeToy. The camera is capable of capturing 60 frames per second video at 640x480 resolution and 120 frames video at 320x240 resolution. In Japan, the device was available starting December 7, 2006. The PS3 will accept signals only via its Bluetooth Remote, as the console does not have an infrared receiver; this prevents the use of universal remotes with the system. This begins with CECH, followed by a letter indicating what model the system is. The last two characters of the model number indicate what region the system is from. The engraved logo is an update of the PS2s with curved edges. PS3 Slim models have labels indicating localized input requirements for power (110 V 60 Hz for North American and Japanese models and 220-240 V 50 Hz for European and Australian models), however teardowns have revealed the Slim power supplies are still universal. The RSX has a floating-point performance of 251.2 GFLOPS. Search Code: The Signal This in turn results in production savings, lower heat production, lower cooling requirements and quieter running. All models support USB memory devices; flash drives and external hard drives are both automatically recognized. The four-channel microphone on the Eye can block out background noise. A seventh runs in a special mode and is dedicated to aspects of the OS and security, and an eighth is a spare to improve production yields. However, they must be formatted with the FAT32 file system. All models released after August 2008 have been reduced to two USB ports at the front, as well as dropping CompactFlash and SD card support. It utilized a 45 nm Cell which resulted in a 34% reduction in power consumption over the previous 65 nm Cell model; the latest Slim model further decreases power consumption with the move to a 40 nm RSX and later 28nm on the CECH-43xx models. The PlayStation 3 supports up to 7 simultaneous controllers over Bluetooth. The Sixaxis is named for its ability to detect motion in the full six degrees.
